**Elective Type:** G

**Prerequisites:**  

C- or better in Circuit Theory I (MFG*137)

**Credit Hours:** 3

**Corequisites:** None

**Catalog Course Description:**  
Circuit Theory II completes an introduction to the fundamental building block for all electrical and electronic devices: the circuit. Circuit Theory II completes the review of basic circuits by guiding the student through a thorough review of alternating current circuits including the RC, RL, and RLC circuits. The student will also be introduced to several electrical devices including capacitors, inductors, and transformers.

**Developmental:** No

**Contact Hours:**

- Lecture: 1.5  
- Clinical: 0  
- Lab: 1.5  
- Studio: 0  
- Other: 0  
- TOTAL: 3

**Class Maximum:** 24  

**Semesters Offered:** Fall

**Topical Outline:**

1. Introduction to Alternating Current and Voltage
2. Phasors and Complex Numbers
3. Capacitors
4. Inductors
5. Transformers
6. RC Circuits
7. RL Circuits
8. RLC Circuits and Resonance
9. Basic Filters
10. Circuit Theorems in AC Analysis
11. Pulse Response of Reactive Circuits
12. Polyphase Systems in Power Applications

Upon successful completion of this course, the student will be able to do the following:

COURSE:
1. demonstrate an understanding of alternating current; its sinusoidal wave form; measurements of the waveform; and the use of the oscilloscope to measure waveforms
2. demonstrate an understanding of Phasors and complex numbers
3. demonstrate an understanding of capacitors’ physical construction, electrical properties, and their use in ac and dc circuits
4. demonstrate an understanding of the concept of self-inductance and of inductors, and an understanding of the inductors’ physical construction, electrical properties, and use in ac and dc circuits
5. demonstrate an understanding of the concept of mutual inductance; an understanding of the physical construction of a transformer and how it operates
6. demonstrate an understanding of the RC circuit: series, parallel, series parallel, and their application in electronic devices
7. demonstrate an understanding of the RL circuit and their application
8. demonstrate an understanding of the RLC circuit and their application in electronic Devices
9. demonstrate an understanding of passive filters: low-pass, band-pass and band-stop
10. demonstrate an understanding of the following theorems: superposition, Thevenin, Norton, and maximum power transfer
11. demonstrate an understanding of the RC and RL integrator (single pulse and repetitive pulse RC Integrators) and of the RC and RL differentiators
12. demonstrate an understanding of the Polyphase Systems in power applications

PROGRAM:  (Numbering reflects Programs Outcomes as they appear in the college catalog)

Electronics Technology Certificate and A.S. Degree

1. demonstrate an understanding of Shop Safety
2. demonstrate an understanding the theory of electrical structure, voltage, current, resistance, and electrical circuit and their measurement
3. demonstrate an understanding of the basic laws of arithmetic
4. demonstrate an understanding of several number systems and codes that are the

<tr>
<td>5. make comparisons with personal computers; as well as, develop an understanding of its origin and growth since conception</td>
</tr>
<tr>
<td>6. demonstrate an understanding of the fundamentals of Automated Manufacturing systems</td>
</tr>
</tbody>
</table>

**GENERAL EDUCATION:** (Numbering reflects General Education Outcomes as they appear in the college catalog)

No General Education outcomes.

**Evaluation:**

Assessment will be based on the following criteria:

tests and quizzes

**Instructional Resources:**

**Required:** Full electronics lab.

**Desired:** None

**Textbook(s)**
